1	Introduction and preliminaries	7
1.1	Introduction	7
1.2	Preliminaries	11
1.2.1	Definitions and notations	11
1.2.2	Peano Arithmetic	24
1.2.3	Recursive functions	27
1.2.4	Arithmetization	33
1.2.5	Representability	38
2	Basics of Gödel's incompleteness theorems	45
2.1	Gödel's incompleteness theorems	45
2.1.1	An outline of the idea of Gödel's proof	45
2.1.2	Gödel's first incompleteness theorem	48
2.1.3	Rosser's first incompleteness theorem	52
2.1.4	Gödel's second incompleteness theorem	56
2.2	Some metamathematical facts of arithmetic	66
2.2.1	Robinson Arithmetic \mathbf{Q}	66
2.2.2	Recursively inseparable set and essentially undecidability	67
2.2.3	The undecidability of some canonical mathematical theories	70
2.3	Tarski's theorem on the undefinability of truth and the definability of satisfaction	73
2.3.1	Tarski's theorem on the undefinability of truth	73
2.3.2	Between truth and provability	74

2.3.3	The definability of satisfaction	77
2.4	Turing's undecidability theorem and Hilbert's 10th Problem	81
2.5	Gödel's incompleteness theorems for \mathbf{R}	89
2.5.1	Meta-mathematical properties of the theory \mathbf{R}	89
2.5.2	G1 and G2 for \mathbf{R}	90
2.5.3	A \mathbf{R} -like globaliser of \mathbf{R}	98
3	Classifications of different proofs of Gödel's incompleteness theorems	103
3.1	Introduction	103
3.2	Proofs of G1 and G2 from mathematical logic	105
3.2.1	Recursion-theoretic proofs	106
3.2.2	Proofs based on Arithmetic Completeness	109
3.2.3	Proofs based on Kolmogorov complexity	111
3.2.4	Model-theoretic proofs	118
3.3	Proofs of G1 and G2 based on logical paradox	121
3.3.1	Berry's paradox	122
3.3.2	Unexpected Examination and Grelling-Nelson's Paradox.	128
3.3.3	Yablo's paradox	129
3.3.4	Beyond arithmetization	133
3.4	Concrete incompleteness	133
3.4.1	Paris-Harrington and beyond	134
3.4.2	Harvey Friedman's contributions	136
4	The limit of the applicability of G1	139
4.1	Generalizations of G1 beyond \mathbf{PA}	139
4.2	Generalizations of G1 below \mathbf{PA}	145
4.2.1	Introduction	146
4.2.2	Generalizations of G1 to weak arithmetic via interpretability	148
4.2.3	The limit of applicability of G1 w.r.t. interpretation	151
4.2.4	The limit of applicability of G1 w.r.t. Turing reducibility	157

5	The limit of the applicability of G2	163
5.1	Some generalizations of G2	163
5.2	The intensionality of G2	169
5.2.1	Introduction	170
5.2.2	The choice of provability predicate	172
5.2.3	The choice of the formula expressing consistency . . .	174
5.2.4	The choice of base theory	176
5.2.5	The choice of numbering	178
5.2.6	The choice of the formula representing the set of axioms	179
6	Incompleteness and provability logic	181
6.1	Preliminaries	182
6.2	Undecidable sentences of arithmetic via provability logic . . .	185
6.3	Derivability conditions of provability predicates	186
6.3.1	Derivability conditions and G2	187
6.3.2	Derivability conditions of Rosser provability predicates	191
6.4	Provability logic of provability predicates	196
6.4.1	Provability logic of the standard provability predicate	196
6.4.2	Provability logic KD for Rosser provability predicates	200
7	Philosophy of Gödel's incompleteness theorems	213
7.1	Gödel's incompleteness theorems and the Anti-Mechanist Ar- gument	213
7.2	Gödel's Disjunctive Thesis	220
7.3	An account of the depth of Gödel's incompleteness theorems	229
7.3.1	Introduction	229
7.3.2	Influence	232
7.3.3	Fruitfulness	240
7.3.4	Unity	248
7.3.5	Some explanations	252
